

HYDRO EXCAVATOR

ENGINEERED TO MOVE DIRT.

Hydro Excavation is a non-destructive method of digging. Pressurized water is used to expose underground infrastructures while the vacuum system simultaneously and safely removes debris. The debris is then stored onboard the Hydro Excavator in a holding tank.

The Hydro Excavator eliminates the risk of damaging existing infrastructures which in return increases productivity and profit.

Premier Oilfield Equipment have spent years perfecting the Hydrovac Excavator into a powerful, user-friendly, safe and rugged piece of equipment. This piece of equipment can be used for many different applications including, safely tunneling, exposing utility lines, digging around fiber optics, exposing sewer lines, gas line tie-ins, making electrical repairs, subsurface engineering, getting to limited access areas and much more!

The CV-Series Hydrovac is the best in the industry. It has been engineered to safely and efficiently pull the most dirt in the least amount of time. The Hydro Excavator has the power, safety and performance to get the job done right.
